Subject: Red and Bonita Final Report R1 With Appendices

Steve,

See the attached final Removal Assessment Report for the Red and Bonita Mine site. The revision includes an updated map with a base length of 75 feet and a sentence stating that the pH of mine discharge water prior to mine disturbance ranged from 6 to 6.5 during 2014. Due to the file size, the final report is being submitted to you in 2 e-mails, one with the appendices and one without appendices. Please let me know if you would like additional changes.

Jan
